

Oleksandr Habelchenko

Junior Python Backend Developer

ABOUT ME

For over 7 months I have been intensively and independently learning Python backend development: daily practice, real pet projects built to a working state and published on GitHub. I hold a technical (IT) education from 2009, which gave me a foundational understanding of systems and networks well before my current path into development. I learn quickly, get up to speed with new technologies on my own, and am able to take a project from idea to a finished solution with a database, Git repository, and documentation.

PORTFOLIO

Full project portfolio (Django, FastAPI, DRF, PostgreSQL, Docker, JWT) — with description, technology stack and code — available on GitHub and on my portfolio website:

github.com/OleksandrHabelchenko
